What is Cash4all?

Cash4all is a truly innovative and unique solution, which is leading the way in creating and defining the standards for a completely new segment for deployers of ATMs in off-premise locations.

The ability to generate through-the-wall (TTW)/exterior ATM type volumes in a previously unseen, cost effective and flexible manner is now here.

Cash4all is an integrated solution comprising:

- Personas 77™ with unique weatherised features allowing the solution to be deployed in exterior conditions.
- An eye catching fibre glass POD from NCR's design centre which complements the weatherised Personas 77.
- NCR Installation and Maintenance services.
- Fluiditi™ security solution offering protection for the cash during replenishment.

What Cash4all does for you:

Allows you to take your brand and service to the consumer in a cost effective, flexible and highly visible manner. To further increase transaction volumes, high visibility wraps are available which serve as a great conduit for advertising or brand promotion.

With such an eye catching externally placed proposition as the Cash4all solution the increased volumes will be instrumental in lowering the breakeven point and increasing site profitability.

The Cash4all solution truly allows you to offer a quality service no matter where the customer is: beside the bus station, in the train station, at the horse-racing event, inside or outside - there is no limit as long as there is power in the area.

New sites can be created without the typical constraints associated with a through-the-wall deployment such as planning permission and building work. This allows for a much faster time to market and temporary events to be catered for.

The solution allows deployers of off-premise ATMs to complement their portfolio of NCR interior and through-the-wall ATMs with an exciting and unique proposition meaning no sites need now be uneconomical and unmanageable.

The Cash4all solution truly allows you to offer a quality service no matter where the customer is: beside the bus station, in the train station, at a horse-racing event, inside or outside - there is no limit as long as there is power in the area.

Maximum flexibility with security of mind

Typical through-the-wall installations require both planning permission and construction work. The Cash4all solution allows for a quicker and much more cost effective time to market and in most cases can bypass planning permission and remove the need for permanent building constructions.

The Cash4all solution offers maximum flexibility with regard to placement. The Cash4all solution is equally at home outdoors as it is indoors.

As site conditions change or demand for a temporary deployment in a one off event arises the Cash4all solution can be easily and cost effectively redeployed.

With such flexibility, security is a key requirement. With NCR's leading ink-staining security solution Fluiditi, as an integral piece of the solution, security is well catered for. Many cost saving benefits are realised namely through a decrease in attacks and a reduction in up front spend.

As you would expect from NCR, rigorous standards on quality and safety are in evidence right throughout the solution. The complete solution has been designed from conception to reality with the safety of the user uppermost in mind.

In addition to the usual exhaustive testing criteria which is an NCR core competence a series of additional testing has been undertaken to make sure the complete Cash4all solution is fit for purpose.

Why NCR?

The only proven solution in the marketplace.

NCR have upwards of 400 such deployments in the UK today with the number increasing daily across a variety of locations.

The Cash4all solution with its uniquely integrated vertical offering provides one point of contact with NCR for the entire solution. This means there is complete focus on ensuring all components meet customer expectations and deliver maximum value.

From installation right through to maintenance NCR is unique in providing a holistic and high quality service to minimise inconvenience to the deployer.

The Results

- ↗ Up to 4 months faster time to market than a traditional through-the-wall installation.
- ↗ Ease of redeployment to alternative or new sites.
- ↗ With the use of the Fluiditi security solution, reduced attacks can save the deployer between \$500 - \$1000 per ATM.
- ↗ Based on customer experience ATMs utilising a wrap from NCR have experienced a 13% increase in transaction volumes.
